EDUCATION

University of Washington Seattle, WA
Ph.D. in Electrical Engineering 2016.9 - 2022.3
Thesis: *Nonconvex Optimization and Model Representation with Applications in Control Theory and Machine Learning*
Papers are published in *NeurIPS, TSP, ICASSP, CDC, L4DC, DCC, OJ-CSys, ICML workshop*

Tsinghua University Beijing, China
Bachelor of Engineering in Electronic Engineering 2012.8 - 2016.7

Skills: Java(big data - Spark, Kafka), C/C#/C++, Python(Pytorch, TensorFlow), ML/DL/AI, NLP/BERT/LLM/GPT, CV/CNN/Resnet, RL, Optimization, CUDA, Algorithm/Data Structure, Cloud(AWS, Azure), SQL, Git, Linux

WORKING EXPERIENCE

Microsoft, BingAds, Software Engineer Redmond, WA
Project: Advertisement Recommendation 2022.4 - present

- Built and maintained the pipelines of user embedding generation model using users' behavior, Ad category feature generation and Ad embedding serving, and user to Ads ranking service (**Java - Spark**, **Kafka**, **SQL**, **C#**, **Object Storage**, **ID Hash Table**). The pipelines serve daily 10B users, 1B MS users and 0.5B events.
- Led the design of, and implemented the unified Ad index generation pipeline and the interface with near real time Ad recommendation (**SQL**, **C#**, **Java - Spark**, **Kafka**). It supplies millions of demands.
- Led the user income prediction project. Trained BERT based models for user income prediction by user web behavior, with the help of LLM/GPT labeling pipeline (**SQL**, **Python/Pytorch - NLP**, **CUDA**, **Azure**). Increased AUC by 0.1.
- Applied BERT for embeddings of URL/user/Ads and modeled URL-Ads recommendation (user-blind recommendation) by maximum apriori estimator and online learning. Carried out validation of models for analysis (**SQL**, **C#**, **Python/Pytorch - NLP**, **CUDA**, **Azure**).
- Set up the flightings and performed analysis of flighting metrics. Produced and analyzed statistics of filtration and selection for customer support (**SQL**, **C#**).

Nokia Bell Labs, Math & ALGO Bell Labs Summer Intern Seattle, WA
Project: Audio Echo Cancellation with Sparse Coefficients 2021.6 - 2021.8
Host: Shirin Jalali

- Reframed audio echo cancellation (signal processing) problem as online LS and implemented SGD, APA, IML.
- Combined with sparsity of the parameters and applied RIP property into algorithm analysis. Derived and implemented proportionate algorithms and regularized algorithms for sparse coefficient estimation.

Google, Software Engineering Intern (PhD) Mountain view, CA
Project: Online Learning for Entropy Coding in Next-generation Video Codec 2019.6 - 2019.9
First authored paper in **DCC 2020**, *with a* **Patent**. *Host: Jingning Han*

- Implemented online update algorithm for probability estimation for entropy coding.
- Generalized baseline algorithm by maximum apriori estimator with online optimization for adaptive learning.
- Implemented experiments on real dataset and the compressed file is 2% smaller than baseline (**C++ & Python**).

RESEARCH EXPERIENCE

University of Washington, Research Assistant Seattle, WA
Project: Towards Understanding the Role of Representation Dimension in Meta-Learning 2020.9 - 2022.3
First/second authored paper in **NeurIPS 2021, TOPML 2021, ICASSP 2021**, *Advisor: Maryam Fazel*

- Demonstrated the procedure and obtained statistical guarantee (sample complexity & error) of meta-learning.
- Obtained guarantee of meta-learning accuracy in the overparametrized regimes, theoretically proved the double descent phenomenon and verified it by numerical experiments.
- Generalized to non-linear models, e.g., multiple class classification, validated on image (CNN/Resnet) and text (LSTM/attention/transformer) classification with MAML as baseline (**Python/Pytorch, AWS**).

Project: Learning Linear Dynamical System via Regularization 2018.10 - 2022.3
First authored paper in **OJ-CSys, L4DC 2020 (oral)**, *Advisor: Maryam Fazel*

- Proposed Hankel nuclear norm (low rank) regularization that learns with provably fewer data and smaller error.
- Implemented regularized method on Daisy, Gym and Mujoco dynamical systems and observed the advantage in input sensitivity, simplicity of tuning parameters, training data size and estimation error (**Python/Pytorch**).

Project: Policy Gradient Descent in Control and Reinforcement Learning 2018.10 - 2022.3
First authored paper in **CDC 2022, CDC 2021**, *Advisor: Maryam Fazel*

- Generalized the optimal global convergence rate of non-convex policy optimization to a family of control problems.
- Proposed the connection between policy optimization in RL and convexification method in control theory.

Project: Perturbed Gradient Descent Method for Non-convex Optimization 2017.9 - 2017.12
First authored paper in **NeurIPS 2019, ICML workshop 2018**, *Advisor: Maryam Fazel*

- Derived convergence rate of noisy gradient descent method for nonsmooth nonconvex optimization problems and extended approximation strategy to Riemannian metric.
- Applied to image processing task where the retraction operator is trained by conditional GAN (**Python/Tensorflow**).

Ohio State University, Research Assistant Columbus, OH
Project: Phase Retrieval and Low Rank Matrix Completion 2015.7 - 2015.9
First/second authored papers in **TSP, ICASSP 2016**, *Advisor: Yuejie Chi*

- Reproduced the derivation and conduced performance test for various phase retrieval algorithms.
- Derived an extension of Wirtinger Flow. Analyzed the advantages against outliers.
