## EDUCATION

---

### University of Washington

*Ph.D. in Electrical Engineering*

Seattle, WA, US

2016.9 - 2022.3

**Thesis:** *Nonconvex Optimization and Model Representation with Applications in Control Theory and Machine Learning*

Papers are published in *NeurIPS*, *TSP*, *ICASSP*, *CDC*, *L4DC*, *DCC*, *OJ-CSys*, *ICML workshop*

### Tsinghua University

*Bachelor of Engineering in Electronic Engineering*

Beijing, China

2012.8 - 2016.7

Skills: Java(big data - Spark, Kafka), C/C#/C++, Python(Pytorch, TensorFlow), ML/DL/AI, NLP/BERT/LLM/GPT, CV/CNN/Resnet, RL, Optimization, CUDA, Algorithm/Data Structure, Cloud(AWS, Azure), SQL, Git, Linux

## WORKING EXPERIENCE

---

### Microsoft, BingAds, Software Engineer

Project: Advertisement Recommendation

Redmond, WA, US

2022.4 - present

- Built and maintained the pipelines of user embedding generation model using users' behavior, Ad category feature generation and Ad embedding serving, and user to Ads ranking service (**Java - Spark, Kafka, SQL, C#, Object Storage, ID Hash Table**). The pipelines serve daily 10B users, 1B MS users and 0.5B events.
- Led the design of, and implemented the unified Ad index generation pipeline and the interface with near real time Ad recommendation (**SQL, C#, Java - Spark, Kafka**). It supplies millions of demands.
- Led the user income prediction project. Trained BERT based models for user income prediction by user web behavior, with the help of LLM/GPT labeling pipeline (**SQL, Python/Pytorch - NLP, CUDA, Azure**). Increased AUC by 0.1.
- Applied BERT for embeddings of URL/user/Ads and modeled URL-Ads recommendation (user-blind recommendation) by maximum apriori estimator and online learning. Carried out validation of models for analysis (**SQL, C#, Python/Pytorch - NLP, CUDA, Azure**).
- Set up the flightings and performed analysis of flighting metrics. Produced and analyzed statistics of filtration and selection for customer support (**SQL, C#**).

### Nokia Bell Labs, Math & ALGO Bell Labs Summer Intern

Project: Audio Echo Cancellation with Sparse Coefficients

Seattle, WA, US

2021.6 - 2021.8

*Host: Shirin Jalali*

- Reframed audio echo cancellation (signal processing) problem as online LS and implemented SGD, APA, IML.
- Combined with sparsity of the parameters and applied RIP property into algorithm analysis. Derived and implemented proportionate algorithms and regularized algorithms for sparse coefficient estimation.

### Google, Software Engineering Intern (PhD)

Project: Online Learning for Entropy Coding in Next-generation Video Codec

Mountain view, CA, US

2019.6 - 2019.9

*First authored paper in DCC 2020, with a Patent. Host: Jingning Han*

- Implemented online update algorithm for probability estimation for entropy coding.
- Generalized baseline algorithm by maximum apriori estimator with online optimization for adaptive learning.
- Implemented experiments on real dataset and the compressed file is 2% smaller than baseline (**C++ & Python**).

## RESEARCH EXPERIENCE

---

### University of Washington, Research Assistant

Project: Towards Understanding the Role of Representation Dimension in Meta-Learning

Seattle, WA, US

2020.9 - 2022.3

*First/second authored paper in NeurIPS 2021, TOPML 2021, ICASSP 2021, Advisor: Maryam Fazel*

- Demonstrated the procedure and obtained statistical guarantee (sample complexity & error) of meta-learning.
- Obtained guarantee of meta-learning accuracy in the overparametrized regimes, theoretically proved the double descent phenomenon and verified it by numerical experiments.
- Generalized to non-linear models, e.g., multiple class classification, validated on image (CNN/Resnet) and text (LSTM/attention/transformer) classification with MAML as baseline (**Python/Pytorch, AWS**).

- Proposed Hankel nuclear norm (low rank) regularization that learns with provably fewer data and smaller error.
- Implemented regularized method on Daisy, Gym and Mujoco dynamical systems and observed the advantage in input sensitivity, simplicity of tuning parameters, training data size and estimation error (**Python/Pytorch**).

- Generalized the optimal global convergence rate of non-convex policy optimization to a family of control problems.
- Proposed the connection between policy optimization in RL and convexification method in control theory.

- Derived convergence rate of noisy gradient descent method for nonsmooth nonconvex optimization problems and extended approximation strategy to Riemannian metric.
- Applied to image processing task where the retraction operator is trained by conditional GAN (**Python/Tensorflow**).

- Reproduced the derivation and conducted performance test for various phase retrieval algorithms.
- Derived an extension of Wirtinger Flow. Analyzed the advantages against outliers.
